

# Safety Interactive

A web based collaboration system

Safety Interactive is based on a simple proven approach to risk reduction, supporting AS/NZS 4360 AS/NZS 4804 and other international standards such as ISO 31000.

## Advantages of Safety Interactive

- Addresses the record keeping difficulties associated with paper - based systems via the use of a centralized online database
- Provides a collaborative, interactive approach to hazard, incidents and issues management, servicing multiple locations and personnel.
- Assists in embedding the process of Safety Management into an organisation's culture through a collaborative team approach
- System is live to ensure that most recent information or report is immediately available for all to see and collaborate on
- Ensures hazards, issues and incidents are reported and acted upon , including notifications required by law
- Employees are collaboratively involved in safety decisions
- Very simple and easy to use. People have used this software without any training
- Provides the framework for a complete but simple OH&S Management System

**Hazard Manager** for proactive hazard assessments and for documenting existing controls and new treatments (actions) to manage the likelihood or the consequence of an event. It may include compliance functionality.

**Incident Manager** to record incidents (events) that may have affected employees and to record causes and take remedial action.

**Issues Manager** to record issues that may have affected employees and to record sign off of the Issues

**Taking control of your OH&S responsibility has never been easier**
